By using "Manage Blender Projects (MBP)" You can:

1. Manage your blender projects as well as clients in a blender. Keep an eye on the progress of your projects and save all details of your project (project status beginning and ending date, income from the project and client's name and name, etc.) within the N-Panel for blender.
2. Start the blender for your project or folder in the list of projects so that you don't have to look for them on your computers.
3. The addon will create the various folders you require when you create an entirely new project. It saves the blender project in the correct folder.
4. NEW!! Track the hours you worked on your project (if you'd like to transfer your data from an older version of the project to the latest version of the project using the timer, learn in the dos tab how to accomplish this).
5. All project information should be exported into a CSV file, to allow you to view an overview of your work and projects.
