

Shadow – Photoshop Extension (.zxp, pdf)

2025-02-10 17:02:12 label 我要反馈 下载页面

Extension for Photoshop that adds realistic shadows for standing objects. It supports Text, normal (raster) layers smart objects, regular layers.

- Types of layers supported include smart objects, text, or regular layers
- Select the angle (set manually or select "Sun position" option) scale, blur (shadow dispersion) as well as opacity and color.
- Auto-updates are almost in real-time.

Panel Controls for the UI:

- **Angle** an angle that shadows (1 359 - 1)
- **Size:** how long the shadow is (1 to 100). It's a percentage determined by the size of the object and it differs depending on the angle of the shadow. Sharp angles create long shadows.
- **Blur** the amount of shadow dispersion in pixels (1 100 - 100)
- **Opacity** how opaque the shadow (1 100)
- **Color:** the shade's color. When it is sunny outside, day, shadows can have a blue tint.
- **Sun position:** it's a feature that calculates the angle of the shadow by calculating the distance of the object relative to the Sun (a point made using the Pen tool in Photoshop). Pen tools inside Photoshop).
- **Auto-update** activates the shadow creation process whenever one or more of these parameters is altered. It is easier to create the desired look for the shadow.

Additional feature Parameters for shadows are stored within the current session of the Photoshop even if the Photoshop panel is closed and then reopened.

Requirements for the SYSTEM:

- Adobe Photoshop CC 2017 and higher
- Windows or Mac

WHAT'S IN INCLUDED:

- Its extension (.zxp the file extension)
- Installation guide (.pdf file format)
