

Aescripts StyleX v1.0.2.2 (Win, Mac)

2025-02-10 16:51:33 [label](#) [我要反馈](#) [下载页面](#)

The performance of the system is heavily dependent on the GPU, and some GPUs from the past (before the year 2012) do **insufficiently** supported. Please **try** before purchasing.

StyleX is a powerful video stylization tool that uses AI technology. It is able to not only convert footage into a cartoon of top definition, but it can also create random stylized videos in the same style as a photo. This tool allows users can easily create stylized effects that are creative, e.g. cartoon drawings, paintings, halftones, and many other effects.

To enhance the visual effect of the cartoons created, The plugin uses a sophisticated AI-based approach to analyze the textures, structures, and colors of the tens of thousands of cartoon images in various styles. Thus, it is able to draw cartoon images efficiently and produce better visual quality.

With StyleX, it is possible to create an arbitrary video with stylized graphics with the appearance of a video or image. With the help of revolutionary neural network technology, the program can efficiently process extremely high-resolution video with top quality and excellent temporal consistency.

Additionally, the StyleX plugin is GPU-optimized to work with Adobe After Effects and Adobe Premiere Pro and is accessible for Mac as well as Windows.

New Changes:

- Performance improvements for StyleTransfer mode in Windows Version
- Fix crashes for multiple GPUs in Windows

Installation

There are two ways to install plugins:

Install manually for After Effects & Premiere Pro:

- For Windows: Copy the unzipped file 'StyleX.aex' to the folder
- C:\Program Files\Adobe\Common\Plug-ins\7.0\MediaCore\

For Mac OS:

- Copy the unzipped file 'StyleX.plugin' to the folder: Macintosh HD\Library\Application Support\Adobe\Common\Plug-ins\7.0\MediaCore\

GPU Requirements

GPU with at least 3GB memory. GPU with 6GB memory or more is recommended for processing footage with higher resolution. GPU which supports Vulkan 1.0. For more information, please check Vulkan Devices, refer to the Linux part for macOS Vulkan support. If the GPU is not supported, StyleX will return a green frame. For MacBook Pro, if there are an integrated graphics processor and a discrete graphics processor, and you see a green frame, it is suggested to disable "automatic.

Plugins

Resources

AeScripts

Register

The register button (in AE, an icon in PR) enables you to register the plugin and check if the plugin is registered. If the plugin is not registered, you will see grid lines overlay, to remove these, you need to put the activation code in the register dialog or register using the manager app.

Style Mode

Two modes: Cartoon and Style Transfer. Cartoon mode is designed to convert the footage to cartoonized sequence. With the Style Transfer mode, the users can generate stylized videos with the given style image or sequence.

Cartoon Level

Available for cartoon mode only. Adjust the cartoon strength, the bigger strength results in a cartoon image with less texture. Style Scale
Adjust the scale of the stylized video. A bigger value gives a coarser stylized output.

Style Image

Available only for Style Transfer mode. It allows users to select a style image or sequence by selecting another layer. More than 60 style images are included in the installation package.

Style Light

Adjust the lightness of the stylized video to react to the input style image. Please note the larger style light does not get the brighter output necessarily.

Contrast

Adjust the contrast of the stylized video adaptively.

Luma Blend

Blend the Luma channel of the stylized video with the source video. When the value is set as 100, the output has the same luma as the source video, only chroma is changed, the user can obtain the color transfer effects with this setting.

Chroma Blend

Blend the chroma channels of the stylized video with the source video. To keep the color of the source video, set this value to 100, the output has the same chroma as the source
