Blender Market – Go Panel 1.0.1: We are pleased to introduce Go Panel - the groundbreaking accessory for Blender that completely transforms the user experience. It is specially designed for tablets. Through Go Panel, it is possible to put aside the stress of remembering keyboard shortcuts for various options and devices.

Blender is well-known for its focus on keyboard shortcuts. This makes it difficult for novices and users using tablets to create textures, texture painting, or 2D animation using Grease Pencil. Go Panel alters all that by offering a single-click switching method between modes and tools.

This new add-on lets users personalize their Panel by removing or adding buttons according to mode or tool, thus saving valuable screen space while only showing the tools you are using. It is also possible to change the panel's name and several columns to simplify the face.

Go Panel allows you to add keyboard shortcuts for its buttons which eliminates the whole process of switching modes. If you're a novice or an experienced veteran, there are a lot of conveniences to be found with this latest accessory.

If you want to increase your productivity using Blender, Go Panel is the best solution. Make time-saving changes and improve your workflow using this vital feature. Check it out now and see the positive impact!
