Faceform (Ex Russian 3D Scaner - R3DS):

Wrap is a versatile 3D modeling tool used across industries for applications such as:

- **Digital Doubles**: Converts 3D actor scans into consistent topologies for VFX and game facial rigging.
- **Virtual Try-On and Avatars**: Processes full-body scans for rigging, animation, and cloth simulation.
- **Micro Detail Transfer**: Enables detailed texture mapping with tools like TexturingXYZ.
- **Machine Learning**: Prepares large scan datasets for AI training and statistical modeling.

- **Node Enhancements**: Grouping, disabling, and searching for nodes.
- **Geometry Tools**: Mirroring geometry, procedural smoothing, and switching geometries.
- **Vertex Mask Features**: Transfer masks, convert to images, and improved editing tools.
- **Image and Transform Tools**: Correct image brightness, distort images, blend transforms, and spline selection for point pairs.
- **Workflow Improvements**: Tablet-optimized brushes, single-file Alembic export, and massive performance upgrades for efficiency.

These updates streamline workflows for VFX, gaming, texturing, and AI applications.
