平面设计

The Unreal engine - Wooden Modular House Props set includes a variety of components for constructing photorealistic wooden houses.

How to use photorealistic wooden house-building components to design your project?

You can use "Unreal engine - Wooden Modular House Props" to design your project.

The set features 12 types of walls, 2 types of doors, 1 gate, 2 types of logs, and 2 types of roofs with 4-5 modular parts each, along with 1 well. It comprises 27 unique meshes with vertex counts ranging from 2000 to 53000, most averaging around 10000. The set includes automatically generated collision and LODs. Additionally, it offers 25 materials and material instances, and 75 textures with a resolution of 4096x4096. These props are compatible with Windows development platforms.
