

The Foundry Ocula v4.0V17 for Nuke (Win, Mac, Linux)

2025-02-10 16:40:02 [label](#) [我要反馈](#) [下载页面](#)

Ocula is a comprehensive suite of 16 workflow plug-in tools for Nuke, designed to streamline stereo post-production.

How to adjust the color, focus and automatic alignment of the project using the tools?

You can use "The Foundry Ocula" to design your project.

These tools address common stereoscopic issues by offering fine-level control for color and focus correction, automatic alignment, and stereo-view retiming. Ocula's image-building capabilities ensure sharp, accurate footage without depth tearing, and its advanced GPU acceleration expedites processing. The toolsets include templates for plate preparation, color correction, and vertical alignment, reducing iterations and speeding up shot turnaround. Key features include the Disparity generator, Vertical Aligner, optical flow-based Retimer, and the New View plug-in, all aimed at improving visual consistency and fixing tricky stereo shots. The Disparity to Depth plug-in generates disparity fields for CG scenes, aiding in depth-of-field effects and deep merges. Additionally, the Stereo and Disparity review gizmos facilitate efficient troubleshooting and quality control.
