Telerik JustMock is an easy-to-use tool that provides a quick and efficient way to create unit tests. This helps you isolate your code logic from tricky dependencies like databases, web services, third-party libraries, etc., and lets you focus on your code logic. If you're working on simple components or complex applications, JustMock enables you to do clean tests in a maintainable way and saves you time and labor.

With **JustMock**, you can mock real objects and replace them with simulated objects that behave like real objects in such a way. This means you can write your code knowing it won't have to interact with an outside system. For example, you can mock the database (so instead of running in the real database, your tests will run in the mock database) to make your tests run faster and more reliably. Then, with JustMock, even advanced scenarios like mocking static methods, sealed classes, and System APIs are just a thing.

For JustMock to work seamlessly with your favorite frameworks and tools such as MSTest, NUnit, or xUnit. It also works with various build systems and code coverage tools to ensure your tests are done right and well integrated into your development process. JustMock is the ultimate choice for developers seeking to increase code quality while simplifying unit testing, powered by Telerik's award-winning support.

Key Features of Telerik JustMock :

- 1. **Mock Static and Sealed Classes:** Easily mock static methods, sealed classes, and properties.
- 2. **Mock Non-Public Members:** Mock private, protected, or internal members and types.
- 3. **Mock System APIs:** Seamlessly mock system APIs like DateTime, FileInfo, and more.
- 4. **LINQ and Extension Methods:** Mock LINQ queries and extension methods effortlessly.
- 5. **Entity Framework Support:** Mock database interactions in Entity Framework for efficient testing.
- 6. **Advanced Mocking Techniques:** Use partial, future, sequential, and recursive mocking.
- 7. **Call Assertions:** Verify call order, frequency, and argument values with assertion tools.
