平面设计   Tutorial

Learn to adjust camera settings to create your desired atmosphere and create impact through your films. We will look at different shooting angles and learn how they impact the visual experience and perception.

We will also delve into rapid engineering to obtain the most effective outcomes.

You will be taught how to organize inputs and instructions in the video to get the desired result.

To fully understand the capabilities of Stable Diffusion, we will also gain the necessary technical background information. You will learn how a diffusion model functions, the importance of seeds and frames, and much more.

By following the detailed instruction following the detailed instructions, you'll be able to put into practice what you've learned to create video clips that millions could view via social networking platforms.

This course allows you to develop your video production skills and better understand the latest AI tools.

Whether you're a novice or a seasoned video producer, this course can assist you in taking your video up a notch and making the desired effect through social media.

The course also offers quick assistance to help you maximize the benefits of the learning process.

If you're ready to unleash your creativity and take on all the possibilities of StableDiffusion Forum or a viral video on Facebook, this course is perfect for you.

Lessons in This Class:

- 1. Introduction
- 2. What is Stable Diffusion
- 3. The Tecnologie behind Stable Diffusion: The Diffusion Model
- 4. Why do we need Stable Diffusion
- 5. What are Models? Leonardo AI is an example
- 6. What is the Seed? Midjourney an example
- 7. What are Frames
- 8. Prompt Engineering in Stable Diffusion
- 9. Finding Inspiration on Lexica and Leonaro AI
- 10. Join the Deforum Discord Community
- 11. Local Installation of Stable Difusion with Python
- 12. Rundiffuison: A Cloud solution that works
- 13. Colab Notebook and Google Drive
- 14. The Pricing in Google Colab
- 15. The Path Setup for the Models and Output
- 16. How Deforum works
- 17. Overview and Quick Guide
- 18. The Basics of Animations: Angle and Zoom as example
- 19. Kamera movement in 2D and 3D
- 20. What does the formula in the bracket mean
- 21. Noise schedule and strength schedule
- 22. Coherence and cadence make the videos smoother
- 23. The prompting cell and negative prompts
- 24. Load and Image settings and the resolution
- 25. Sampling Settings, the Seed, and the steps
- 26. Batch settings and prompt weights
- 27. The last settings before the rendering
- 28. Render your first video
- 29. Letting people age and the resume animation
- 30. Your learning experience
- 31. Init Image: start with your foto as a keyframe
- 32. Start with your videos as starting keyframe
- 33. Video Input: Lay prompts over videos
- 34. The first 3D video
- 35. ChatGPT as personal assistent
- 36. Use other and specific models
- 37. Keystring generator for a faster workflow with decorum
- 38. Audio keyframe string generator synchronizes music and animation
- 39. Complete Projekt
- 40. What should you create, and where can you get inspiration
- 41. Learning experience in 3D
- 42. Kaiber a solied and easy alternative
- 43. Loopsie and disco or wrap diffusion
- 44. What is next: Create and share your animations
- 45. Thank you
