

Just Great Software DeployMaster v7.5.1 (29 Apr 2025) Pre-Activated

2026-04-08 10:38:30

Just Great Software DeployMaster is a simple utility that will make you build professional Windows installers without the need to work with complicated scripts. It also allows you to bundle your software into one setup file that is compatible with most Windows versions to ensure that your users have an easy and quick installation process. Novices are able to install your application with a single click, and advanced users may add their own folders, components, and settings at their levels of discretion.

The installer is intelligent enough to install 32-bit and 64-bit systems automatically, and you have a choice of installing the app on all or only on the current user without administrative privileges. It also allows portable installations, that is, your software can operate out of a USB, without altering the computer. Whenever updates are released, **Just Great Software DeployMaster** simply finds older versions and updates them without losing the previous preferences of the user.

It does the technical side of things, too. The big installers can also be broken into smaller ones in order to have easy downloads, and the installation is fast without unnecessary delays. Upon installation, it leaves a suitable uninstaller that leaves files, registry entries, and file associations quickly and neatly. The built-in digital signing and a graphical interface to setups allow you to make reliable and polished installers within a shorter time.

Key Features of Just Great Software DeployMaster:

- One-click install for beginners** – Users can install your software quickly without answering technical questions.
- Advanced install options** – Power users can choose folders, components, and system changes.
- Single installer for many Windows versions** – Works across old and new Windows systems from one setup file.
- 32-bit and 64-bit support** – Automatically installs the correct version or lets you build separate packages.
- Per-user or all-users installation** – Works with or without administrator rights.
- Portable installation mode** – Run your app from a USB drive without modifying the computer.
- Automatic upgrade detection** – Finds previous versions and updates them while keeping settings.
- Component selection** – Users can install only the features they need.
- Clean uninstaller** – Removes files, registry entries, and restores file associations.
- Large file support** – Handles installers bigger than 4 GB and can split them into smaller parts.
- Fast setup launch** – Starts quickly without long extraction delays.
- Digital code signing support** – Helps reduce security warnings and build user trust.
- Visual setup builder** – Create installers using a GUI instead of writing scripts.
- Custom actions support** – Run extra installers, scripts, or DLL logic during setup.
- Automatic system folder handling** – Places files in the correct Windows locations automatically.
