Aescripts Arc:

The tool offers a compact user interface for easing keyframes in Adobe After Effects, featuring a single slider with multiple functions. Users can easily apply different easing modes, such as Ease (both in and out), Ease Out, Ease In, Linear, and variations that set one easing value to zero.

A dynamic HUD shows the current easing mode, and users can quickly switch between modes using keyboard modifiers or by clicking an influence percentage icon. For help, users can press CTRL + ALT + SHIFT + Button. This tool streamlines the keyframing process while maintaining an adorable design.
