Aescripts Stereo 3D Toolkit V3 (Win, Mac):

The Stereo 3D Toolkit is a powerful After Effects toolset for creating complex stereoscopic 3D compositions.

The Stereo 3D Toolkit 3 offers advanced stereo 3D workflow management, enabling true left and right channel hierarchy control and seamless compatibility with various 3D effects and plug-ins, including Particular, Form, Element 3D, Optical Flares, and Plexus. It integrates smoothly with camera footage and renders from external 3D software, supporting multiple stereo 3D workflows within a single project.

The toolkit allows for easy conversion of any pre-comp into a stereo 3D pre-comp, ensuring that effects maintain accurate stereo 3D depth by using true left and right channels rather than collapse transformations.
