Blender Market - Shape Generator 1.7.14: The Shape Generator is a versatile tool designed to swiftly produce an array of unique 3D objects for digital artists. It serves as a wellspring of inspiration, offering a starting point for designs or supplementary details.

Over time, it has evolved into a comprehensive solution featuring customizable presets, random transformations, automatic UV mapping, and even animation capabilities.

It enables users to:

- Spawn ideas and abstract concepts for creative inspiration, which can be further edited or sculpted.
- Establish base meshes for various purposes like spaceships, game assets, and more.
- Craft shapes for background elements or intricate peripheral details.
- Seamlessly integrate with complementary tools such as the Plating Generator addon for detailed model creation.

The operation is initiated by defining a random number and adjusting parameters like length, scale, and rotation to generate diverse extrusions. Additionally, features like face overlap prevention, mirroring across axes, and modifier application enrich the modeling process.

Furthermore, it supports the simultaneous creation of multiple objects to enhance detail. Once generated, modifiers remain intact, allowing for further shape refinement or editing.

Compatible with other add-ons like the Plating Generator, Bevelled Extrude, and the Window Generator, as well as third-party addons like DECALMachine, the Shape Generator offers a robust framework for 3D modeling and design exploration.
