DbExpress Driver for SQLite is basically considered to be a database independent coating that has the capability to do find a frequent interface in order to provide the users with the rapid access to the SQLite from the Delphi along with the C++ Builder just like the Community Edition, Mac OS, windows and even the platform of the Linux. Along with the particular database engine that it has, it has the capability to provide the users with a motorist just like an independent library since the access of the data coating   is considered to be very thin and very simple   and it has the capability to offer the users with a very high speed database connectivity and it is considered easier to be deployed by the user. The user has the capability to use the driver in precisely the same manner as it was provided by the Embarcadero. DbExpress Driver for SQLite   has the ability to offer a direct high-speed accessibility to the database of the SQLite for the users and developers and the user does not require to install the different data supplier layer on the system and this is the reason why do user has the capability to work quicker compared to the ones according to the standard of the data connectivity option of Delphi. The software according to the driver for the SQLite is basically very simple to be deployed. The user has the capability to secure the information from the access of the unauthorized outsiders and it provides a very powerful and customizable database encryption ending of the SQLite. Along with the process of linking, encryption services are capable of being automatically added into the user program and the subsequent calculations are basically going to have the power in order to guard the death out the user. The Blowfish, AES, tripleDES, Cast 128, enables the users with the use of a third-party SQLite library with the use of the encryption services of the SQLite.

Devart dbExpress driver for SQLite Great Features:

It has the following features and attributes that are stated as below such as:

- The components as well as the libraries are basically designed in order to help a user to write a very high performance as well as a lightweight data layers easily and flexibly.
- It normally uses an advanced data access algorithm as well as a technique for the optimization process.
- There is a major framework support of the Delphi GUI.
- It has the capability to develop the applications of the VCL for its users, and application for the windows, Linux and finally Mac OS.
- The product is very compatible with the latest versions of the IDE and the additions which include the Community Edition and it is compatible with the previous version of the IDE for its users.
- The user has the ability to use the freeware tool of the dbMonitor, and also to analyze the calls of the DB that are made by the application, with the use of the DbExpress Driver for SQLite.
