The Character is Ideal for:

Presenter, Lecturer Announcer, Guide Narrator Instructor, Model, Explainer and Show Host

Display the attractive 3D model in your work.

The sleek and clean character lip-syncs, and the presentation is synchronized in your own voice. The flexible movements and the images displayed by the characters provide an impressive pull on viewers. The complete 3D character is able to be added to your project. This is done using After Effects.

You can customize the coloring of the character to what you like. You can also create natural character movements by combining motion and changing the timing and lip-syncing to the voice audio. The whole process will be Simple, Easy, Fast!
