Blender Market

BlenderMarket - RetopoFlow Retopology Toolkit For Blender v4.0.2 Alpha: RetopoFlow revolutionizes retopology in Blender, offering a dedicated mode that effortlessly creates clean, custom mid or low-poly meshes over high-resolution sculpts.

Powerful Tools:

- Contours: Easily place and adjust loops around cylindrical forms with Ctrl+left click drag, ensuring accurate representation even in complex scenarios.
- PolyStrips: Quickly sketch and define important loops, manipulate selections like a Bezier curve, and maintain automatic surface snapping for perfect placement.
- Strokes: Effortlessly extend main loops or create grids with a single line, ensuring evenly distributed quads with each stroke.
- PolyPen: Maximize control for fine details with precise selection extension and automatic snapping to vertices and edges.
- Knife Tool: Create complex cuts into existing geometry for increased detailing.
- Relax Tool: Massage geometry into evenly spaced quads, maintaining vertex snapping to high-poly surfaces.
- Tweak Tool: Intuitively push and pull geometry, making adjustments fast and fluidly.
- Patches Tool: Fill large areas at once by selecting the boundary edge and clicking 'F.'
- Loops Tool: Easily insert and slide loops while keeping vertices snapped correctly in place.

Helpful Resources:

- In-App Tooltips and Documentation: Seamless access to shortcuts and comprehensive documentation for tool guidance.
- Bug Reporting: Quickly report issues via the toolbar with automatic screenshot capture and console details for efficient troubleshooting.
- Continuous Updates: Enjoy ongoing support and updates with a custom auto-save and backup feature to prevent data loss during unexpected events.

Compatibility:

- Works in Blender 2.7 to 3.0+
- Your purchase includes versions for Blender 3.0+, 2.8x/2.9x (RetopoFlow 3.2.4), and 2.7 (RetopoFlow 2.0.3).

Known Limitations:

- The optimal performance for source sculpts is up to 1m polygons, and target meshes are up to 20k.
- The Blender interface is covered during RetopoFlow mode; not all Edit Mode tools and add-ons are accessible.

- Custom Mesh Rendering: Exclusive to RetopoFlow mode, cleanly overlays low-poly geometry on high-poly meshes without overlap or distortion, solving depth sorting issues.
- User-Friendly Interface: Say goodbye to complex settings, jump into RetopoFlow mode, and start working without tweaking shrinkwrap, object scale, snapping, or mesh visibility.
- Built for Artists: Designed to make retopology enjoyable, the toolkit ensures quick sketching over tedious pointing and clicking, promoting good topology practices.
