InfraWork Conceptual Design Software lets you visualize and comprehend design projects in the context of. It can be used to:

- Organize large amounts of data that can be used to create information-rich context models
- Streamline processes using the use of conceptual design tools that combine engineering principles
- Use visually appealing images to assess the design and clearly communicate your intent to all stakeholders.

Real-world work

Gather data from multiple sources to base your ideas in the real world.

Visually rich, accurate conceptual designs

Rapidly conceptualize, assess, and refine road railway, site water, as well as various other projects for infrastructure.
Discuss ideas with stakeholders.
Create photorealistic visuals to enhance understanding and share your ideas.

What are the possibilities for using InfraWorks

Generate rich context models
Combine large amounts of data into context models. Easily integrate geospatial data into designs and simulate existing conditions to represent natural and built surroundings.

Design and research possibilities
Explore concepts within the context of analysis and simulation tools, allowing you to discover the key aspects of your projects. Compelling, immersive visual experiences help you communicate design intent.

Explore InfraWorks capabilities
Learn to use the tools available in InfraWorks to understand the design process, discover solutions to your problems, and increase participation earlier.
