KeenTools GeoTracker 2024.3.0 for Blender:

GeoTracker is a powerful geometry-based object and camera tracking tool designed for seamless integration into workflows, including Blender. It enables users to recreate object movement from live-action videos using 3D models, offering precise alignment and tracking capabilities.

- **Geometry-Based Tracking**: Utilize 3D models to replicate real-world object motion.
- **Intuitive Workflow**: Easily position and align models with minimal effort.
- **High Precision**: Achieve accuracy through keyframe creation and manual refinement.
- **Masking Tools**: Incorporate 2D composite masks and 3D surface masks to exclude unwanted elements.
- **Focal Length Estimation**: Supports precise tracking even without predefined camera parameters.
- **Zoom Shot Tracking**: Automatically detects and tracks focal length changes.

Pipeline Integration

GeoTracker ensures compatibility with various animation-supporting formats, facilitating export and integration into other software. It also supports FaceBuilder heads for personalized head tracking and provides built-in texturing tools to project and bake textures from videos directly onto 3D models.
