Aescripts Gaussian Splatting v1.4.1 (Win):

Gaussian Splatting is an After Effect plug-in that allows real-time import, editing, and export of 3D models in .ply format, powered by GPU acceleration.

It has been expertly crafted to work with After Effects for ease of 3D compositing, viewer customization, and animation. This tool is perfect for dynamic effects as it comes with cropping, color imposition, opaqueness adjusting, splat manipulation, and so much more. Combine 10 models, apply noise deformation, and add additional workflows by exporting the new scene as .ply.

- Integration of 3D Models
- Import. Ply files made on other programs directly into After Effects.

Scene Customization

- Crop with spherical or box shapes and Y Plane.
- Combine 10 models within a scene.

Visual Enhancements

- Use ramp maps to colorize models (spherical or box-based).
- Use color grading for each model individually.

Animation Controls

- Animate splat scale with spherical or box ramps.
- Animate the opacity of splats for clever reveals.
- Use noise distortion to create dynamic reveal effects.

Rendering & Output

- Depth passes are rendered for advanced 3D compositing.
- GPU rendering using real-time for smoother performance.
- Import the entire scene back to .ply format for later use.

Advanced Effects

- Use noise to distort models for unique visuals.
- Animate the size and position of splats for outstanding reveals.
- Gaussian Splatting for After Effects provides the most powerful tools and features for artists and designers
- interested in forward mobility in the 3D animation and compositing.
