Photoshop for Interior Designers: This class is intended for Interior Designers and students who would like to improve their presentation skills quickly and efficiently.

Each chapter will introduce students to basic techniques that will improve the standard of their presentations and will, without a doubt, have an immediate impact on college and clients.

The first step is learning to remove and add furniture, lighting fixtures, ures, etc., to existing compositions. Also, we will be taught how to create patterns and apply them to produce different finishes, like tiles, wallpaper, or wood flooring. Additionally, the student will understand how to alter the colors of various surfaces, such as furniture. Ultimately, students will be taught ways to draw layouts in AutoCAD. We've all seen how cold an AutoCAD design can be and how difficult it can be to market an idea through the cad drawing.

Photoshop to be used by Interior Designers provides step-by-step instructions for interior designers to effectively utilize Adobe Photoshop to visually communicate their concept of design using illustrations and graphic images, as well as to demonstrate concepts through the process of visual thinking. Instructions explain how to incorporate sketching with hand and freehand into digital illustrations. The techniques taught include the creation of Floor plans, elevations, and floorplans, creating isometric or perspective drawings, and incorporating lighting, materials, background, and entourages for interior design demonstrations.

The lessons you'll be learning:

- 1. Rendering of layouts Autocad layouts aren't exactly presentation materials; they are sometimes technical, cold, and sometimes difficult to comprehend for customers. Rendering
- 2-Photoshop for Interior Design
- Three Adobe Photoshop software lets you edit various images, from photos to the original artwork.
- Four-Special Effects Photoshop can include color, finishes, or effects in your photos.
