W.A Production KickShaper v1.0.0b2-TCD: Introducing Pump & Thump, where kick drums take center stage to lay the foundation for your music. We understand the struggle when dealing with lackluster kick samples that might be compressed, lacking in fundamental frequencies, or simply sounding weak and uninspiring. That's where KickShaper steps in to rescue your mix.

Whether you're into EDM, hip-hop, rock, or any genre imaginable, KickShaper is designed to elevate your kicks, making them punchier and more impressive than ever. Developed with cutting-edge algorithms and rigorously tested on thousands of kick samples by award-winning audio engineer Emrah Celik, KickShaper isn't just a plugin; it's a tool that taps into the expertise of top-notch sound design wizards.

Crafted with user-friendliness in mind, KickShaper ensures your kicks reach their full potential. The plugin delivers natural-sounding tails, well-defined transients, and depth, all while maximizing the digital realm's dynamic range. With a streamlined interface and intuitive workflow, even beginners in mixing and mastering can create the perfect kick in seconds, as if guided by a professional studio engineer.

Frequency Finder: KickShaper kicks off your journey with the Finder button, intelligently identifying the dominant frequency of your kick. This ensures that KickShaper's processing aligns seamlessly with your kick's musical key.

Deboom: At the heart of KickShaper is the Deboom dial, uniquely shortening the wavelength of low frequencies. Say goodbye to overpowering kicks; Deboom gives you punchy and impactful kicks that blend seamlessly with your basslines.

Tails: KickShaper's exclusive Tail module resonates with filters, creating frequency resonance without boomy artifacts. By harmonizing sub frequencies from the original kick, KickShaper tails integrate cleanly, ensuring a cohesive sound.

Thump & Click: Thump fine-tunes your kick's sustain, impacting only the low end, while Click introduces an advanced transient shaping algorithm for precise control over transients.

Tone & Enhance: KickShaper's Tone section offers Cut for subtle low-frequency trimming, Low for punch, Mid for muddiness adjustment, and High for click control. The Depth control enhances kicks with analog hardware convolution, while Heat introduces subtle saturation. Punch replicates console compression, and Clip ensures punchiness on smaller speakers.

Visual Feedback & Comparison: Built on vector graphics with a resizable interface, KickShaper provides live audio display for accurate monitoring. Compare different processing chains with AB comparison and use undo/redo buttons for experimentation.

Presets: KickShaper includes a plethora of factory presets suitable for various genres, serving as starting points for your kick sculpting adventures.

W. A. Production, comprised of real-life producers, delivers creative plugins like KickShaper to facilitate studio-quality processing quickly and effortlessly. Elevate your kicks with Pump & Thump today!

Introducing a cutting-edge Kick Designer plugin, equipped with advanced features to revolutionize your kick drum production. This plugin incorporates unique processing modules, providing unparalleled control over your kick's sonic characteristics.

- Unique Processing Modules:** Experience a tailored kick design journey with specialized processing modules, each offering distinct capabilities to shape and refine your kick's sound.
- Frequency Finder:** Effortlessly identify and align your kick with its dominant frequency using the Frequency Finder, ensuring precision in your sound design.
- Shape Sculpting:** Craft your kick's sonic identity with dedicated shape sculpting modules such as Tail, Deboom,
