Local Hero saves the day by migrating Community Resources to your Regional workstation for Improved efficacy.

Local Hero is a script for localizing the community resources on your project, Letting you operate easily with no frustrations of slow system plumbing!

So you are working in a studio, along with your Ultra HDR 8k Dynamic Range EXR VR 3D Multipass Ultrasharp footage is taking FOREVER to get AE to flow off the community. THIS SUCKS!

Can not it be good if you can easily simply work off your Regional computer, Without needing to be concerned about relinking and replacing all of your footage avenues, then having to relink them after you are back to the community? Yes. Yes, it would.

Or, as a manufacturer, readily package jobs to contribute to freelancers without Including a tonne of work if you would like to bring the job back into your system, as Collect trashes the first path links.

Local Hero works in two manners: PROXY and REPLACE

PROXY MODE sets your job item to utilize the Neighborhood advantage as a proxy, allowing for Uncomplicated enabling & disabling.

REPLACE MODE simplifies your endeavor thing's file directly with the local edition. To Disable Replace, it is ideal to utilize Local Hero's DELOCALIZE function.

- **LOCALIZE:** Finds any network resources and copy them into a Community workstation
- **DELOCALIZE:** Removes local replica of the resources and eliminates local links
