Blender Market - Insect Swarm - Procedural Insect Systems v4.1 & 4.2:

Procedural Insect Systems is a fully-featured add-on for Blender that quickly generates distinctive insect swarms, centipedes, and similar swarming creatures.

This procedural asset suits a broad spectrum of scenes - from nature to the dark, moody ones. The pack contains 21 animated, low-poly insects optimized for the system so that thousands of active entities can be sustained simultaneously. Achieving desired animations is easy, even with autonomous movement, path-following, and attraction/avoidance mechanics. The outcomes are exported in an asset table, which is prepared for immediate use in the application.

- **Procedural Insect Systems:** Generate guided or autonomous swarms of insects that crawl or fly.
- **Extensive Insect Library:** Animated and low poly bees, butterflies, flies, ants, spiders, centipedes and many more.
- **Attraction and Avoidance:** Set insect attraction and avoidance points and influences that simulate realistic activity with changeable distance and speed.
- **Path Following:** Insects can be guided to follow specified paths using curves with adjustable accuracy and radius of influence.
- **Realistic Movement Settings:** Alter the speed and irregularity of random movements and direction change frequency to make the assembled insectery appear more lifelike.
- **All-Round Usage:** Not just limited to insects. Other swarming species like bats, birds, rats, and fish can be used too.
- **Pre-Animated Models:** Every insect has pre-animated custom objects for speed control and time offset, along with custom object properties.
- **Simplified Assets:** The assets are neatly packed in the .blend filing, making it easy to integrate and drag into projects.
- **Intuitive Design:** Controls tend to be more intuitive because they are sorted and pre-configured. Defaults can be restored with the simple press of a key.
