What is the Glitch Transitions Pack?

A "Glitch Transitions Pack" is a collection of video transition effects that mimic the appearance of glitches and digital distortions. These transition effects are commonly used in video editing to create a visually striking and modern look in videos, particularly in music videos, vlogs, or creative projects where a glitchy or futuristic aesthetic is desired.

Here are some key features and characteristics of a Glitch Transitions Pack:

Transition Effects: The pack typically includes a variety of transition effects that simulate glitches, data corruption, or digital interference. These effects often involve quick and unexpected shifts in video or image elements.

Digital Distortion: Glitch transitions may incorporate elements like pixelation, RGB channel separation, screen tearing, and other artifacts associated with digital errors and distortions.
