

Aescripts – AutoCircularMotion v1.05 (Win, Mac)

2025-02-10 16:53:03 [label](#) [我要反馈](#) [下载页面](#)

- Create circular motions easily
- AutoCircularMotion allows you to define circular motions quickly.
- As well as linking multiple layers, arranging their movement, and creating other motions like swinging and bobbing.
- Controlling the Z-axis lets you determine the depth of movements, too.

New Changes:

- Improved support and better error messaging for online activation
- Fixed a problem that might not start.
- We implemented the help function in the options menu.
- Press the "?" button on the lower left to display.

How do I set it up

1. Choose one or more layers. Click [Apply].
2. Adjust the settings using "ACM control" which will be generated automatically.

Applying to the shape group

- Choose a single shape layer that includes the shape group.
- Click [Apply] to apply this shape group on different layers.

Applying to [Trapcode Particularly]

- Select [Apply] after choosing a single layer that has been applied. Trapcode Particular] has been applied.
- This permits you to apply ACM to Trapcode Particular].
- It is impossible to apply light or null layers, which *ACM was used as an emitter.
- Follow the instructions above for using these.
