### Aescripts Screen Mapper:

Screen Mapper (formerly Display Builder) is a tool for After Effects that simplifies setting up multi-screen display templates. Users can design templates within the tool and export them directly to After Effects, where Screen Mapper automatically generates master compositions and precomps, properly naming, labeling, and positioning them.

include a responsive toolbar for quickly modifying displays, grids, gutters, guides, rulers, and snapping for precise layouts, as well as image import and scaling. Users can create, save, and share templates, export canvas files for collaboration, and work with pixel mapping presets and keyboard shortcuts to streamline the workflow. The interface is designed to integrate seamlessly with After Effects' Composition window, offering intuitive controls for building, adjusting, and previewing multi-screen displays.
