Oliver Keys - Film+ Lightroom Profile & Actions Pack:

The Film+ Emulation Workflow for Lightroom provides a quick and realistic film aesthetic for digital photos. The pack includes a unique ColorFilm Profile that emulates lab scans, eliminating digital artifacts from raw images and enhancing color calibration to achieve a film-like quality.

Users can then apply various film curves, film stock styles, and split-tone options to replicate classic film looks. Additional grain actions, light leaks, and vignette effects allow for further customization. The pack contains one ColorFilm Profile, as well as presets for basic adjustments, color, and texture.
