WHAT WE RECORDED

OCEAN SHORES happen wherever land meets the sea. You will find 372,000 kilometers (620,000 km) of Ocean Shores on earth: high energy Shorelines exposed to swells or very low energy shorelines in areas shielded from Huge swells and accordingly just subjected to smaller waves created by local winds. Both are subject to tidal activity, in and out, throughout the littoral zone and its wildlife and plant smorgasbord, and of course human action.
