Blender Market – Cleaner v1.2.0: Addon to clean multiple meshes simultaneously. This is a fast method to clean meshes after importing files from other programs into Blender.

It automates repetitive tasks, which can become routine and even annoying when importing several models. The primary goal of this add-on is to automatize the process and streamline your workflow.

Actions executed by the command that is used for the object specified in the present version are:

- Unify the normals from one direction.
- removes duplicate vertices
- takes out material slots that aren't being used.

II/TYPICAL SCENARIOS:

- A) Import data from another software: The addon functions as an essential tool to clean models quickly as the initial step following data import.
- B) Architecture: In the field of architecture, the benefit is the ability to edit multiple pieces of information at the same time. The benefit of this addon is, therefore, for urban planning and the import of models for areas of cities in which there will be a significant amount of uniform objects. Looking for detail can help to look at systems from multiple objects, like the facade or cladding.
- C) 3D printing: The essential requirement is the elimination of duplicates and proper solutions to normals. When converting models into printable, the software can be helpful in the initial creation of numerous 3D models to be printed 3D printing.

New Changes:

- Critical update. The Cleaner is a better code! New functions and complete simplification. Commands apply only to specific objects. The functions are now divided into three main items.
- Clean Completely - Remove doubles, remove materials that aren't used, Unify normals, and clean Custom Split Normals for a selected object.
- Clean, unused mats. The removal of materials that aren't used from your selected objects.
- Clean Custom Split Normals - Delete Custom Split Normals for Selected Objects.
