Blender Market - BoxCutter v7.20.7.1: Boxcutter is non-destructive from the moment it was created. However, we have put these features first. Boxcutter guarantees that shapes will be preserved until you are ready to use their shapes.

Cut, Slice, Inset, Join, Knife, Extract, Make. In addition, there are options to customize your experience, from the appearance of the top bar, to how the cuts fade; we can help you. We can cut, remove, reuse, and export to other projects and make it a point to do it only once. Don't make mistakes.

Like all our tools, updates are always free. We're determined to bring Boxcutter to a higher standard than it is now. We want to make our clients happy with their choice and are willing to hear your suggestions. Always available for any assistance issues.

Boxcutter was designed to be the fastest screen 3D view-cutting tool. Through our experience, we've developed and improved the tools with years of experience and time to improve the workflow to run as quickly as humanly feasible for the users. We provide a range of features to tailor the experience so that it is moving smoothly. Every day, the tool is thoroughly tested to ensure that they work with the current version of Blender and the build-bot for future versions of Blender that are yet to be released.

Our commitment to helping with problems is second to the very last. The documentation is continually updated to address more questions and offer a more complete box experience. To keep the excitement surrounding the software, we upgrade it regularly to ensure that the tools are working and functioning at their peak.

- **Artist-Optimized Experience** - The visuals of box cutters are essential, and we want you to be pleasant and different from the tools you have seen before. With various colors to differentiate the modes and calibrate the behavior of your screen, the Boxcutter is designed for use efficiently and with precision.
- **Custom Cutter** - Box was the first shape we created and was my personal most loved. However, with the advent of extraction, users can use the shape's surface and make them cutters to cut shapes you would never have thought possible. The possibilities for invention are limitless.
- **The On-the-fly Edit System** - Tab to Live is the default feature in Blender, and Boxcutter extended that concept also. By using tab to live, you can utilize dots that assist you in making adjustments and changes. Even mid-draw aids are available to help with any settings you must perfect before committing.
- **Fastest Cutter.. period** - When Boxcutter has been started by clicking and dragging, you can create an outline. It's that simple to it, and Boxcutter isn't any more simple than this if we tried. Boxcutters can be used with pens, mice, and tablets with systems designed to function more efficiently.
- **Advanced Snapping System** - We have taken special care to prevent issues with booleans like hot lining. We also offer multiple snapping options to ensure you get the right shape where you require it. Dot snapping is just a click away and can fade distance, making it more accessible in the brain.
- **Self. Cut** - Do you ever feel random? Do you want to make something from nothing? A custom cutter self. Cut is the right tool for you. It can use the mesh you're cutting as a cutter, which results in some interesting outcomes.
