- Step 1: Import into your project
- Step 2. Drag your footage in and crop

- Work in conjunction with After Effects and Premiere Pro
- NO PLUG-INS REQUIRED

What are Film Frame Transitions?

Film frame transitions refer to the techniques and methods used to transition from one individual frame or shot to another within a film or video sequence. These transitions are employed to connect scenes, create visual interest, convey information, and impact the overall flow and pacing of the narrative. Unlike traditional film editing, which deals with the arrangement of shots within a sequence, film frame transitions are focused on the specific way one frame morphs into another within a single shot.
