Cryptic Sound Science 03 (WAV, MiDi): Are you looking to take your music to the highest level? This kit contains everything you need to make unique beats and drums, 808s that can make your neighbors complain about noise the most crisp hi-hats and open-hats available, and otherworldly kicks and toms created using vintage drum synthesizers. You'll also have your favorite claps drums, rims, snares, and the signature earcandy percussion sound. On top of that, it comes with a bonus folder that contains hi-hat midis and percussion loops to provide you with immediate bounce ideas. Do not fret about the selection of sound and let your thoughts appear in the real world!

Sound Science 03 is the final kit in the Sound Science series I wanted to make something different. By processing the entire sound by using an effect chain analog (neve 33609 (limiter/compressor) and API 2500 (compressor) to tube tech smc2b (stereo multiband compressor) I was able to get the best out of the sound. Every sound was also made and processed through different instruments (game changer audio - light pedal Strymon - Volante, UAFX astra, chase bliss generation loss mkii, and more) as well as a unique digital effect chain to achieve the best quality possible.
