- ATN Document
- Assist file

**What is Skin Retouching Photoshop Action?**

The "Skin Retouching Photoshop Action" by 2lagus is a Photoshop action designed to automate the process of retouching and enhancing the skin in portrait photographs. Photoshop actions are pre-recorded sets of steps and adjustments that can be applied to photos with a single click. In the context of "Skin Retouching," these actions are intended to make the process of enhancing skin texture, removing blemishes, and creating a smoother and more polished look more efficient.

Using a skin-retouching Photoshop action can be a time-saving and efficient way to improve portrait photos, especially when you have a series of images to process. However, it's important to use these actions with care and moderation to avoid creating an unnatural or over-processed appearance. Maintaining a balance between retouching and retaining the subject's natural features is key to achieving professional and appealing results.
