OBSIDIAN Charcoal Photoshop Actions (JPG, ATN, PDF):

Quick Charcoal Effects In One Click!

Step 1. Choose an image to work with. The higher the resolution, the more effective. To get the best results, try to utilize 300dpi as often as you can.

1. When starting out ensure there is only one Layer within your document (only one layer - the picture). If you have an unfilled background layer, delete it. Only one.

Step 3. Choose the type of Charcoal Action, and then hit play

Step 4. Voila! The Charcoal Effect is now applied. Are you looking to test another one? Simply remove the Group and begin from scratch. The original image will never be damaged or changed.

Step 5. Once the Effect is in place, you can mix as many levels as you like, Sharpen Sets or the blurred Vignettes, Charcoal Brushes and even Charcoal Powder Textures however you'd like
