Tools　　Applications

Araxis Merge is considered to be a visual file comparison for the process of merging, as well as the synchronization of the application in the folder. The process of printing and the legal professionals can immediately recognize every sweet which is between the different reports on the draughts of the contract. Directly has the ability to open as well as examine the text out of the Microsoft Office, open documents, PDF, as well as the file of RTF. Copying the text from other programs, such as Microsoft Word, is possible, and pasting it into a text contrast.

For the code review as well as the auditor, the process of recognizing in the circumstance each and every change made between the two or three sauce hierarchies of code. can produce a standard HTML as well as an XML record for the user finding. The opinion, as well as a bookmark to the folder or even a file contrast, is possible, and it has the ability to save a single file, which is archived to go into the different group members for the inspection process.

For software engineers as well as web developers, **Araxis Merge** can compare, comprehend as well and unite the different sources of the variations of the file that are present. Working quickly as well as accurately, no matter whether the user is comparing the individual files or reconciling the entire branch of the source code, is possible. Using the three-way contrast to incorporate the changes that the user makes and those created by the colleagues with the use of the frequent version of the ancestor. Synchronization of the website along with the staging area with the help of the FTP and the plug-ins provided by it.

For the process of launching the quality control of the managers, it can compare the different code branches to offer the user complete confidence and the ability to comprehend every change made to the document for a particular release. Comparing the products released to ensure that the only anticipated file is being modified and also to produce a record of HTML or XML to change the audit function.

Whether the user is capable of working with the revisions that are multiple of the text document or required to keep the multiple folder hierarchies in the condition of sync, the merge and the merging process can save time and also reduce the errors by the process of assisting the user in working fast and correct.

Key Features of **Araxis Merge** :

1. It has the ability to provide a cross-platform license to the users and developers and permits the user to use the Windows as well as the Mac OS version in order to merge.
2. Comparing the big files along with the 64-bit version of merge is possible and it permits the user to take advantage of the potentiality of the huge amount of memory which is available on the system of 64-bit.
3. Making the most out of the retina of the Mac in order to display as well as the high resolution of the PC screen for the utilization of the 100%, 125%, 550, or even the spelling of UI.
4. The process of comparison between the merge changes in the two updated versions along with the common ancestor is possible.
5. Using the conflicting changes of the reconciliation that are made in order to set files by multiple developers or even to merge the branches in the control of a source code or software configuration is possible.
6. It has the capability to directly compare the file, which is contained within the variety of formats that are archived.
7. Comparing the numeric values that are located in the text files as well as treating them and an identical it is desired by the user.
