The most important instruction is:

(1) How to select the subject

This section will allow you to select your subject and then copy it to a separate layer. Select the Background of the photo using the Quick Selection Tool (W). To add or subtract from the selection, use the Shift/Alt buttons. To invert the selection after you have made a perfect selection press Control-Shift-I on your keyboard. Next, go to Select Modify Smooth. Set the Sample Radius at 5 px. Next, select Modify Contract. Set Contract By to 2 pixels. Next, select Modify Feather.

(2) To get a great result, you must first extract the canvas area. Select your background image, then use crop tools to extend three sides. The PDF Help file has more information. Next, resize your images to 3000x2000px and 2000x3000px with dpi 300.
