Combine and compare Excel sheets, VBA formulas, macros, and other forms simultaneously. xlCompare utilizes its advanced algorithms to detect variations between worksheets and display the comparison results in a user-friendly and visual design. Color-coded comparison results appear precisely like the Excel workbook, and this isn't a typical cell-by-cell comparison. xlCompare can identify deleted, added, or changed data and allows you to merge disparate data with just one click. It compares and joins database lists. Command line mode is an ideal tool for managing version control tasks.

xlCompare is a tried and tested xl comparator solution used by thousands of computers across the globe. We are very proud of each one of our clients!

There are numerous helpful features and advantages that the xl comparer gives. You'll efficiently perform all spreadsheet comparisons with them and join routine tasks!

xlCompare examines your worksheets for altered cells and provides an xlCompare report that is colored with highlighted cells that have been changed and rows that have been deleted or inserted.

Maintain your table to current by detecting unique and duplicated data on your worksheet. xlCompare searches for all records that have been that are inserted into the Excel Table.

Examine all formulas on the worksheets for any modifications. xlCompare will direct you to the modified portion in the equation. Do not search for the differences in the text by hand!

Each of the changed cells and columns unique to the worksheet will be identified by color on the worksheet. It is easy to identify them in the worksheet alongside other cells. If this isn't enough, use the to ignore the Formatting option to remove the formatting of your original cells.

Read duplicated records with a single click. Highlight duplicates using different background colors to create the spotlight on these rows. Copy and move rows with duplicates by filtering them in the worksheet. Sort Duplicate Rows, Keys and keys.

The spreadsheet you're comparing the spreadsheet you compare - Price List, Accounting Statement or Financial Model The spreadsheet you compare xlCompare provides the most appropriate algorithm for comparison. This will give more accurate results when compared.

Simple-to-use Merge Commands transfer cell data from one worksheet to another worksheet in native and visual format. You can update cells one at a with bulk merging commands. Update the database table with new records in just a few seconds.

Explore all differences in one unified list. Examine changes and merge the Excel spreadsheets' rows, cells and columns that have been compared using the list. Difference Explorer gives you an exact answer to what has changed within the workbook.

Do not ignore hidden Rows and hidden Columns. Select the data that you want to compare. Display Difference Between Cells. Highlight cells using color when merging. Options for command line. xlCompare offers a variety of options that you can choose from to get the most effective results in comparison.
