Dehancer Pro for Final Cut v2.0.1 (Mac):

Dehancer is a comprehensive film emulation tool designed for Final Cut Pro and Apple Motion on macOS, delivering a true-to-life analog cinematic look. It features over 60 film profiles, print film emulations, grain effects, halation, bloom, film damage, overscan, and more. The software is optimized for Apple Silicon and supports multi-GPU setups on Intel Macs, providing an authentic analog aesthetic for digital cinema workflows. Dehancer offers extensive customization tools to replicate the imperfections, textures, and visual character of traditional film formats while enabling LUT generation for seamless grading integration.

"Dehancer Pro for Final Cut" sample:

- **Film Profiles:**
 - Over 60 film emulation profiles for a realistic analog look.
- **Print Films:**
 - Kodak Vision Color Print Film 2383
 - Fujicolor Positive Film Eterna-CP 3513DI
 - Versatile tools to recreate the cinematic print film look.
- **Halation:**
 - 8 customizable halation profiles for glowing light sources, highlights, and enhanced skin tones.
- **Film Breath & Gate Weave:**
 - **Film Breath:** Frame-to-frame changes in exposure, contrast, and color for an "analog feeling."
 - **Gate Weave:** Simulates film strip motion within the film gate.
- **Film Damage:**
 - Realistic dust, hair, and scratches to replicate authentic film defects.
- **Overscan:**
 - Includes film gates, perforations, and frame spaces for popular 8, 16, 35, and 65 mm film formats.
- **Film Developer:**
 - Customizable tools to standardize color development with Color Boost and Contrast Boost.
- **Film Compression:**
 - Protects highlight texture and emulates compressed film-like highlights.
- **Basic Color Pipelines & Cineon Film Log:**
 - Supports Cineon gamma for film scans and film-like workflows.
- **LUT Generator:**
 - Export grading looks like LUTs with Small (17x17x17) or Normal (33x33x33) quality options.
- **Hardware & Software Support:**
 - Optimized for Apple Silicon and Metal-enabled GPUs.
 - Compatible with Final Cut Pro 10.6.1+ and Apple Motion 5.6.3+.
 - Multi-GPU support on Intel Macs (excluding Intel Iris/HD Graphics GPUs).
