- 22 Unique FullHD Scenes
- 100 percent After Effects
- Multi-purpose
- Color control
- It works in conjunction with every After Effects language (Expressions Universalized)
- After Effects CS6 and above
- No plugins required

How to edit a project:

1. Open the scene you want.
Edit texts in compositions named "Text".
For example, open the folder "02. Scenes" > "Scene_01" > "Edit" and change the texts in the compositions "S01_Text_01" – "S01_Text_05".
You can also open compositions with text directly from the composition "Scene_01" (See screenshot below).

2. Place your images or video files into compositions named "Placeholder".

For example:

Open the folder "02. Scenes" > "Scene_02" -> "Edit" and open the compositions "S02_Placeholder", put here your video or photo (See screenshot below).

In all other Scenes, texts and media are edited in the same way.

3. If you want to change the colors of the project, go to the composition "03.

Change_Colors_Here" and use the layer "Color_Control" (works on all compositions in the project). Before setting the color, we recommend that you insert your media files.

4. After all the changes in the project, send the "Scene" you need to the Render Queue.
