Neodynamic ThermalLabel SDK for .NET is a versatile .NET Standard Class Library that enables developers to create and print advanced barcode labels effortlessly. By writing pure .NET code in either VB.NET or C#, users can design labels ranging from simple to complex layouts, incorporating various elements such as text, barcodes, graphics, images, RFID tags, and shapes like circles and rectangles. **Neodynamic ThermalLabel SDK for .NET** supports a wide range of platforms, including .NET Framework, .NET Core, Legacy ASP.NET MVC & Core, Xamarin, Mono, and Universal Windows Platform (UWP), ensuring compatibility across diverse project environments.

One of the standout features of **Neodynamic ThermalLabel SDK for .NET** is its compatibility with Zebra, EPSON, and Honeywell-Intermec thermal printers, supporting ZPL®, ZPL II®, EPL, and Fingerprint® commands. With a unified object model, developers can create label designs that seamlessly translate to different printer types, ensuring consistent output across various devices. The SDK offers robust support for data binding scenarios, allowing users to bind text and barcode items to various data sources, including arrays, lists, databases, XML datasets, and CSV files.

boasts a comprehensive set of features, including counters for dynamic data indexing, data masking and formatting for serialized items, over 100 dynamic expressions for versatile label customization, full-color label support for non-thermal printers, and first-class barcode support for popular linear, postal, component composite, and 2D barcode symbologies. Additionally, developers can easily preview and export labels to various formats, including raster images, vector images, and Adobe PDF documents. With straightforward integration and deployment, **Neodynamic ThermalLabel SDK for .NET** streamlines development, empowering developers to create and print high-quality barcode labels efficiently in their .NET projects.

Key Features of **Neodynamic ThermalLabel SDK for .NET** :

1. .NET Standard Class Library
2. Create advanced barcode labels.
3. Print to Zebra ZPL/EPL, EPSON ESC/POS, Honeywell-Intermec Fingerprint Thermal Printers
4. Pure .NET code in VB.NET or C#
5. Platform compatibility: .NET Framework, .NET Core, Legacy ASP.NET MVC & Core, Xamarin, Mono, UWP
6. Supports Text, Barcodes, Graphics, Images, RFID Tags, Shapes
7. Unified object model for consistent output across printers
8. Data binding support for various data sources
9. Counters for dynamic data indexing
10. Data masking and formatting
11. Over 100 dynamic expressions
12. Full-color label support for non-thermal printers
13. First-class barcode support for popular symbologies
14. Preview and export labels to various formats
15. Easy integration and deployment
