## What is Progress Telerik Test Studio Ultimate?

Telerik Test Studio Ultimate is a test automation solution for the Internet, Mobile, and Desktop. Telerik Test Studio enables you to quickly and easily craft automatic tests, incorporate them on your CI/CD environment after your nimble workflow, locate defects earlier and send a much better quality software product. Automate repetitive manual QA jobs and ensure a high degree of software quality always in time with no last-minute openings. 1 test automation tool to handle all your Functional, Performance, fill, and API testing requirements. Build automated tests to your latest technology -- Angular, React, WPF, MVC, Ajax, RESTful, etc... Easily build and always execute cellular tests for iOS and Android. Benefit from supreme service for Telerik UI controllers and Kendo UI widgets. Facilitate better cooperation between .NET programmers and QA engineers, boosting your team's productivity. The interplay between code and code-less measures to construct more complex test scenarios.

Testing is crucial to fulfill Agile/CI/CD's delivery cycles and keep germs from final products. Still, they need to rapidly deliver electronic encounters, additional capacities, and advancements that place pressure all around. Meanwhile, most of the automatic testing approaches are not designed to encourage QA testers without coding expertise.

## Progress Telerik Test Studio Ultimate Great Features:

### Record/Playback Lets Quick Automation

Record your evaluation and utilize automated playback for a simple and quick method to manage your test and run the same script to check numerous browsers.

### Quick and Secure Test Runs

Utilize the built-in scheduling attribute or incorporate test suites at almost any CI/CD setup.

### Monitor Quality

Keep tabs on automation and program quality via the Executive Dashboard with on-line effects and reports.

### Minimize Exam Maintenance

Care is significantly diminished with patent-pending element discovery, centralized object repository, smart suggestions, and multi-mechanism part hunt.

- Automated Web and Desktop Testing
- Visual Studio Plugin
- Manual Testing
- Exploratory Testing
- Functional UI Testing
- Test Scheduling and Execution
- Parallel Test Execution on Multiple Machines
- Continuous Integration Support
- Mobile Testing
- API Testing
- Performance Testing
- Load Testing
- 100 Virtual Users

### Functional UI Testing

去下载

标签

- Supports: HTML, Angular, AJAX, MVC, WPF, Silverlight, etc.
- Powerful Test Recorder
- Integrated DOM and Element explorers
- Extensive find element logic
- Shared elements, steps, and tests
- C# and VB support for coded steps and standalone helper classes
- Import of third-party libraries
- Data binding
- Native support for Telerik UI controls and Kendo UI widgets
- Web UI and API tests integration
- Extensive reporting
- Results dashboard
- Scheduled and distributed runs
- Visual Studio extension
- Source control integration - TFS, Git
- Bug tracking integration - TFS, Jira
- CI/CD Integration - Jenkins, TFS, Bamboo, TeamCity, etc.
- APIs for integration with third-party test case and results from management systems
- Command-line runner

## Mobile Testing

- Supports iOS and Android
- Supported app types: Native, Hybrid, Web, NativeScript, Xamarin
- Intuitive recorder and test extension
- Custom step builder with actions and verifications
- Elements repository
- Visual tree explorer
- C# and VB support for coded steps and standalone helper classes
- Execution on Windows, Mac, or Linux
- CI/CD Integration - Jenkins, TFS, Bamboo, TeamCity, etc.
- Command-line runner

## RESTful API Testing

- Record HTTP(S) traffic
- Import Fiddler SAZ files
- Path expressions - XPath, JSONPath
- Variable management
- Built-in and custom verifications
- Execution flow management with Wait&Goto steps and conditions
- Value conversions - urlencode, base64, md5, sha1
- JUnit and XML test results

## Load and Performance Testing

- Capture HTTP(S) traffic
- Re-use Test Studio Web tests for Load testing
- Auto and Custom dynamic targets for customization of requests
- Scheduled and distributed run
- Extensive metrics and counters
- Comprehensive results viewer
