Components

Devart dotConnect for SQLite Professional has been described as having a very high-performance OMR, which permits the data providers for SQLite. It is responsible for building on the technology of ADO.NET to present a complete solution for developing a database application based on SQLite. It can introduce new and modern approaches to the process of designing the application architecture, along with boosting productivity and, at the same time, facilitate the process of development of the applications of the database. The ADO.NET SQLite provider can support a huge range of SQLite features like the user-defined function, SQLite Crypt, as well as the encryption extension and has the support for enabling the extension of the SQLite along with the connection for the string parameters. can provide a huge number of GUI tools for users to increase productivity**.** At the same time, it can provide a very convenient component editor that is visual for the editors to simplify the component tweaking process.

Key Features of **Devart dotConnect for SQLite Professional** :

1. It can implement session state, role, membership, site map, profile, and other providers of ASP 2.0.
2. It has the power to enable the process of integration of the services along with the process of exporting and importing the data from the databases of SQLite.
3. It can monitor and allow tracing of the database per component with the help of the free application dbMonitor.

4. It can support the framework and take it to the ADO.NET.
5. It enhances the control of the pooling through the process of connecting the string.
6. It has the ability and the power to create database-independent applications for users and developers.
7. It can support most of the functions that are canonical as well as Entity Frameworks.
8. It has a nature that is interchangeable with SQL and Microsoft LINQ.
9. It has an interface that is server-independent.
