- 10-Split Tone Sets
- 10 Desert Presets Bonus
- Film Grain Shortcuts
- Thirty of the RAW images I have are available for you to edit
- User Guide & Installation Tutorial

How to install

First, extract the presets from the ZIP folder.

To install the presets on Lightroom Classic CC, simply navigate to the develop module within Lightroom > Preset hotbar on the left > Click the + icon and "Import Preset" > Select the presets you wish to import.

To install on Lightroom CC app on your desktop: Click on the Editing section of the app - Open the Presets section - Click on the three dots at the top of the Presets panel that opens and select Import Presets

To install on Lightroom mobile, the easiest method is actually to install Lightroom CC on a desktop or laptop and the presets will automatically sync to your mobile!

If you do not have access to Lightroom CC on a desktop, it's a little more complex but easy once you have installed once before. Firstly, you must save the DNG files on your phone. Then, open and import each one individually in Lightroom CC and save the settings of each DNG as a separate preset within the app (top right three dots, create preset) - do this for each image in turn (yes, this is a long process but that's how Adobe designed it for some

reason!)

Then you can import RAW / JPEG files and apply these presets to your images in one click by cycling to "presets" on the Hotbar and choosing one that fits.
