

CData Drivers for JSON v24.0.9060 (21 Oct 2024) All Platforms + License Key

2024-12-18 23:02:00 [label](#) [我要反馈](#) [下载页面](#)

CData Drivers for JSON simplify data integration with easy-to-use, bi-directional data drivers for connecting to JSON Services. This solution streamlines the integration of JSON data with BI, Reporting, Analytics, ETL Tools, and Custom Solutions, offering versatile access to live JSON data across applications, emphasizing a swift connection to real-time data, unmatched query performance, and seamless integration with preferred analytics tools.

In ETL, replication, and warehousing, CData's JSON integration extends preferred tools with dedicated drivers and adapters, ensuring robust, reliable, and secure data movement. This includes connectivity between RDBMS or data warehouses and JSON, addressing operational reporting, query offloading, and performance enhancement needs, supporting popular database protocols like ODBC, JDBC, and ADO.NET, and simplifying the connection and management of JSON data across various database management applications.

For workflow and automation tools, **CData Drivers for JSON** seamlessly connect to JSON from popular tools like data migration, ESB, iPaaS, and BPM tools. This provides straightforward access to JSON data from applications such as BizTalk, MuleSoft, SQL SSIS, Microsoft Flow, Power Apps, Talend, and more. Designed for developers, offer a simplified data-centric model for JSON integration, accelerating the development of high-quality applications. Additionally, the drivers provide a virtual database abstraction on top of JSON data, supporting advanced data virtualization features such as query federation and capabilities for query delegation and predicate pushdown.

This package includes the following components:

[Web & Script](#) [Other](#)

- Excel Add-In for JSON
- JSON ADO.NET Provider
- JSON Data Cmdlets
- JSON FireDAC Components
- JSON JDBC Driver
- JSON MuleSoft Connector
- JSON ODBC Driver
- JSON Power BI Connector
- JSON SSIS Components
- JSON Tableau Connector

Key Features of CData Drivers for JSON :

1. Easy-to-use bi-directional data drivers for connecting to JSON Services
2. Seamless integration of JSON data with BI, Reporting, Analytics, ETL Tools, and Custom Solutions
3. Versatile access to live JSON data across applications
4. Swift connection to real-time JSON data with unmatched query performance
5. Integration with preferred analytics tools for streamlined processes
6. Extension of preferred ETL tools with dedicated drivers and adapters for JSON connectivity
7. Robust, reliable, and secure data movement for ETL, replication, and warehousing purposes
8. Connectivity between RDBMS or data warehouses and JSON for operational reporting, query offloading, and performance enhancement
9. Support for popular database protocols like ODBC, JDBC, and ADO.NET
10. Simplified connection and management of JSON data across various database management applications
11. Seamless connection to JSON from popular workflow and automation tools
12. Straightforward access to JSON data from applications like BizTalk, MuleSoft, SQL SSIS, Microsoft Flow, Power Apps, Talend, and more
13. Simplified data-centric model for JSON integration designed for developers
14. Accelerated development of high-quality applications
15. Virtual database abstraction on top of JSON data supporting advanced data virtualization features such as query
16. federation and capabilities for query delegation and predicate pushdown.
