#### MY FAVORITE TEXTURES YET

I am not going lie...these might just be a few of my favorite Movie textures I have developed yet. And I am so stoked to finally be discussing them.

Insert an authentic picture look to your digital footage together with "filthy" overscanned movie mattes - in 4x3, 16x9, and 2.35x1 aspect ratios! Now In movie form - together with all the shake and jitter of a true movie scan.

#### FILM LOOK TOOLKIT

Take things a step farther and coat 8mm or 16mm movie Perforation components as wanted... along with magnificent unreleased bonus movie Grains, adjustments, and textures (contained from the 4K Pro package only). This is Truly the greatest movie transformation tool - providing you complete control over Every film advantage in a single modular and customizable package!

With this package, I needed to offer the dirtiest boundaries and Details potential - helping market"the film look" over anything another Electronic tool available by keeping subtle lens dirt, hair, and curved corners.

#### COULDN'T BE EASIER...

They could not be easier to use... Simply place above your Footage and put on the mixing mode defined in the document name (no guesswork)!

Totally compatible with Final Cut Pro X, Adobe Premiere, After Outcomes, Davinci Resolve, Lumafusion, and much more!
