Retime nested comps using ease and power!

FINALLY, APPLY TIME REMAPPING

You've functioned together with moment remapping before? Now you Can use it to comps! FoxRetimer uses AE's construct in time remapping feature rather than manually transfer layers, fix keyframes & retime nested comps! Never get frustrated using period remapping anymore!

FoxRetimer also lets you reverse your entire Cartoon or mirror it like an outside cartoon! When Placing your cartoon, foxRetimer corrects every coating, moves keyframes, and flips curves you brought for your cartoon.

DUPLICATE & LOOP YOUR ANIMATIONS

If you like to loop your Animations with time remap, foxRetimer does too. It Is Going to automatically Replicate layers and keyframes if needed! Perfectly for fixing looped Films to fulfill your precise requirements!

- **ADJUST IN AND OUT:** Should you examine this, all your coating's beginning time, in addition to in- and - out-points are corrected. If you're looping or mirroring your cartoon with your curve, then layers will also be mechanically reproduced with this option checked.
- **ADJUST KEYFRAMES:** Each your preciously place keyframes and curves could possibly be transferred by foxRetimer should you examine this option. If you're looping or mirroring within the springs, keyframes or portion of these curves have been mirrored or replicated also.
- **RETIME NESTED LAYERS:** In case your comp includes a nested a different footage-layer and also you test this option, all of the layers will be correctly retimed to match the initial retiming. An exceptional retiming curve is made per coating.
- **ADD INBETWEEN KEYS:** In case foxRetimer applies Your time remapping it only moves your present keyframes to recreate exactly the moment remapped curve. Should you check this option, foxRetimer will include in-between Keyframes on retiming factors to recreate a much better representation of your retimed curve.
