DALL-E 2 is one of the most efficient AI Art Generation programs on the market. It's comparable to the capabilities from Mid Journey as well as Disco Diffusion but DALL-E 2 has tools to not just create generative art as well as edit images already in existence. The capability to edit images is the thing that distinguishes DALL-E 2 apart from the other competitors.

This course is divided into two parts, firstly, the course will make it easier to use text prompts and other parameters to create breathtaking works of artwork. In addition, this course will show the many ways DALL-E 2 can function as an image editor by removing or adding elements to photographs (known by the term inpainting). Also, we will learn ways to expand images beyond their borders (known by the term outpainting).

DALL-E 2 is now off their Waitlist. The software is completely free. However, there is an amount of 15 credits per month. In this course, I've bought additional credits because I utilize DALL-E 2 frequently in my professional work.

FILES INCLUDED

- 1. Course Promo
- 2. What is DALL-E 2
- 3. How to access DALL-E 2
