The ImageKit10 ActiveX is a component that lets you add image processing functionality to your applications efficiently. Together with the ImageKit10 ActiveX, it is possible to write software that recovers images from TWAIN scanners and digital cameras such as web cameras; which load and store image files and convert images from 1 format into another; which edit pictures, draw text and shapes on pictures; which screen images and publish pictures; which screen images as thumbnails, and even more. Most of the ImageKit10 performance can be available in DLL design API.

The ImageKit10 ActiveX component may be utilized in Visual Studio (2005 and over) through COM wrapper. Several sample programs for every supported development environment are contained using the ImageKit10 ActiveX, letting you rapidly get up to speed. Each sample application certainly demonstrates one or two important purposes, so it's simple to comprehend and simple to locate the essential code to enable that functionality in your applications.

The ImageKit10 ActiveX has the same secure, simple-to-use purposes as constantly, supports both the 32bit and 64bit surroundings, and includes Unicode and ANSI models.

While keeping the stability and endurance of the preceding variant, "ImageKit 9 ActiveX", we've additional scan capabilities along with a PDF document save function.

The ImageKit10 ActiveX includes five controllers: the ImageKit controller, three net camera controllers, Record, Play, Preview, along the Thumbnail controller. The ImageKit controller offers comprehensive image-processing, drawing, printing, and scanning performance. The WebCamera controls enable you to program and control picture images from internet cameras. The Thumbnail controller gives a simple interface for displaying images as thumbnails. These controllers are sent in 4 variants: a 64-bit Unicode variant, a 32-bit Unicode variant, a 64 bit ANSI variant, and a 32 bit ANSI version.
