BlenderMarket – Simply Wrap Pro 1.5.2 + Assets: Simply Wrap Pro simplifies creating fluidly wrapped objects in your Blender scene. To use the add-on, select your collision object and start drawing in a zigzag pattern from one view on both sides of the object. The add-on automatically detects face orientation, eliminating the need for constant view rotation. Focus on drawing, and the add-on will take care of the rest.

Important Information:

- Using a low-resolution collision mesh for a smoothly wrapped object is recommended, ensuring efficient fluid simulation.
- For optimal performance, have only one object in the scene while using the add-on.
- While the add-on's wrap may need additional adjustments, it generally requires much less work than manual wrapping and view rotation.
- If you face difficulties or the add-on doesn't work as expected, contact the developer for support and guidance.

The add-on has demonstrated over 50% time-saving in tests compared to conventional methods like shrinkwrap and curve with Extrude settings. These traditional methods often involve time-consuming adjustments with the Proportional Edit tool.

Developed in collaboration with Alberto Gonzalez (AFX), Simply Wrap Pro offers a guided and imaginative approach. The workflow is customized for intuitive use, enhancing your experience with the add-on. Check out the provided videos and images to witness the power of this wrapping tool.

A recommendation is to create a base wrap mesh with the add-on and further edit it using Cloth Sculpt Brushes if necessary.
