New Features for version 2.1:

- Install and use like a regular addon (no need to append the node tree manually each time).
- Draw Custom Droplet path option (sticks to surface)
- set maximum droplet count option (crash safe)
- more shape customizations
- new example scene (leaf droplets)

Complete Procedural

Every geometry element is generated 100% procedurally, which allows for incredible customization and performance.

Fully Customizable

It is designed to be easy to operate; the settings are easy to understand. There are many options to design your own variations of droplets. Make it more flexible by adding the "advanced settings" section.

Droplet Trails

Give a little authenticity to your droplets by using an option for the trail.

Droplet Shader

Create the most beautiful droplets with the built-in custom shader for droplets, in which you can control the depth of rays and shadows.

Non-Overlapping

With the use of proximity between droplets, the distribution occurs without the appearance of overlapping droplets. You are able to change the value of proximity to suit your needs.

Customized Weight maps

Create custom weight maps that limit the distribution of droplets within your mesh. You can also restrict each droplet group to its own (long, small, big, small, medium, big).

Animation support (Wip)

Give life to your renders by animating long droplets. Modify the shapes to give your renders a more realistic appearance. This feature is being developed, and at present, it is only available on flat surfaces.

- More control over the shape of the objects
- Advanced settings
- More efficient

What is Droplet Generator

A "Droplet Generator" is a device or system used to create small liquid droplets of controlled size and consistency. This technology finds applications in various fields, and a droplet generator's specific design and purpose can vary based on its intended use.
